

RUSIRA SENATH LIYANAGE

Software Engineer | Full-Stack & Mobile

North Wollongong NSW 2500 | 0418 549 596 | rusira.senath@gmail.com

LinkedIn: <https://linkedin.com/in/rusira-senath-liyanage> | GitHub: <https://github.com/InnomenteRusira>

PROFESSIONAL SUMMARY

Software Engineer with a Master of Computer Science (Distinction) from the University of Wollongong and over two years of industry experience delivering scalable mobile and full-stack solutions in a production MedTech SaaS environment. Skilled in Flutter, React, Nest JS, Postgre SQL, cloud-based architectures on AWS, and CI/CD automation. Passionate about solving complex technical problems and building reliable, large-scale systems. Quick to learn and adapt to emerging technologies, with a strong ability to contribute effectively in fast-paced environments.. Hold full working rights in Australia and open to relocation nationwide for suitable opportunities at short notice.

TECHNICAL SKILLS

Programming Languages: Dart, TypeScript, JavaScript, Python, Java, C#

Mobile Development: Flutter (iOS & Android), React Native

Frontend Development: React + Vite, Next.js, HTML5, CSS3, Material UI, Ant Design, Figma

Backend and APIs: Node.js + Express, NestJS, ASP.NET Core Web API, RESTful APIs, Flusk, Swagger, Redis Caching

Cloud Infrastructure: AWS (RDS, Cognito, EC2, ECS, S3), Cloud-based serverless architectures

Databases: PostgreSQL, MongoDB, MySQL, Firebase

Devops and Tools: Git, GitHub Actions, CI/CD pipelines, Docker, Kubernetes

EDUCATION

Master of Computer Science (Software Engineering) Jul 2023 – Jul 2025

University of Wollongong (UOW), NSW, Australia • Distinction Pass (76.69% WAM)

BSc (Hons) Information Technology (Software Engineering) Feb 2019 – Mar 2023

Sri Lanka Institute of Information Technology (SLIIT), Colombo • Second Class Honours (3.27/4.0 WGPA)

G.C.E A/L Secondary Education 2005 – 2018

Ananda College, Colombo • Commerce Stream with Information Technology

EMPLOYMENT HISTORY

Graduate Software Engineer | Innomente Pty Ltd, Wollongong NSW Oct 2025 - Apr 2026

MedTech SaaS • Promoted from Intern to Graduate Engineer for consistent delivery of production features.

- Engineered scalable backend services using NestJS with Express server and PostgreSQL for compliance-critical medical screening workflows, driving performance improvements and ensuring high reliability within a monorepo architecture.
- Built scalable frontend features in React (TypeScript) using modern patterns such as hooks, Context API, and Redux. Deliver responsive, accessible, and high-performance web features for the Collection Manager medical screening web platform.
- Implemented and optimised drug testing workflows for the Collect Assist Flutter app, enhancing offline-first architecture (GetX + SQLite), performance, and security across platforms, while automating iOS/Android releases via CI/CD (GitHub Actions, Docker).
- Collaborated with cross-functional stakeholders in an Agile development environment to validate requirements and deliver multiple production features in a remote-first environment while tracking project progress through Asana, maintaining high delivery quality and consistency.
- Enhanced engineering productivity and development workflows by leveraging AI-assisted coding tools including Codex, Claude, and GitHub Copilot for debugging, code generation, optimisation, and rapid feature delivery.

- Built a production Flutter mobile application integrating AWS services (RDS, Cognito) through RESTful APIs to replicate a complex medical screening desktop SaaS platform, played the team leader role throughout the project.
- Led system design, improving state management reliability and scalability for future desktop feature parity, while automating mobile releases via GitHub Actions.
- Optimised server-side PDF and E-mail generation by migrating a legacy HTML to PDF pipeline to Puppeteer-based templates, improving performance and accessibility by 75%.

- Built UiPath RPA solutions automating HR reporting from Redmine, reducing manual effort by 85%.
- Automated system reporting workflows using Linux shell scripting and UiPath, generating structured analysis reports and improving operational efficiency.

RELATED PROJECTS (Personal Github - <https://github.com/RusiraLiyanage>)

- Built a full-stack booking platform with NestJS, PostgreSQL, React, TypeScript, and Ant Design, covering authentication, service selection, barber matching, slot booking, and appointment management.
- Integrated a Claude-first AI consultation flow where barbers are matched by AI based on service-specific questions, customer answers, uploaded hair photos, and salon safety rules, producing structured barber prep briefs.
- Implemented secure customer/admin auth with JWT, refresh-token rotation, Google OAuth, active-session detection, previous-session termination, remember-me, and session expiry handling along with Redis caching for relevant APIs.
- Developed admin and scheduling features including availability calculation, overlap prevention, service/barber/safety-rule management, appointment briefs, pagination, and stale-data polling with Web Sockets.
- Structured the platform with PNPM/Turborepo, modular NestJS services, DTO validation, database migrations, unit tests, Dockerized deployment, GitHub Actions, ECR, ECS, AppConfig, and Slack notifications.

- Designed and developed a cross-platform Flutter mobile application supporting the on call ability to medical screening.
- Architected backend integrations using AWS cloud services and REST APIs, ensuring the seamless functionality of the system.
- Implemented CI/CD pipelines using GitHub actions and conducted cross-device testing across Android and iOS platforms for high maintainability.
- Delivered the project in collaboration with industry partner Sample Assist, leading to a graduate engineering role.

RESEARCH PUBLICATION

the 17th International Workshop on Semantic and Social Media Adaptation & Personalisation

Final Year Research Project at SLIIT

DOI: [10.1109/SMAP56125.2022.9941896](https://doi.org/10.1109/SMAP56125.2022.9941896)

Tech Stack: Flutter, Django (Python), NLP, Computer Vision, Tensorflow, Scikit-learn, Firebase (Firestore Database), Facebook Developer API, Twitter Developer API

AWARDS

- Sample Assist Intern of the Year 2024
- IFS Discovery Challenge 2 Winner 2023
- Information Technology Subject Prize Winner in Commerce Section – Ananda College, Annual Prize Giving 2017
